

We thank you and congratulate you for choosing BOS product, designed and developed by enthusiasts and handmade with care in France.

Please refer to the user manual available in the download section at www.bosmtb.com. It contains the important safety, maintenance, and warranty information you will need in order to safely install and use your BOS suspension as well as detailed set-up, tuning, and service information.

Good knowledge of your BOS product will make its day to day usage more enjoyable.

Coil spring

The spring rate depend of the body weight.

Weight (kg/lbs)	< 60 kg < 132 lbs	de 60 à 80 kg from 132 to 176 lbs	de 80 à 105 kg from 176 to 231 lbs	> 105 kg > 131 lbs
Spring	green	orange	grey	purple
Availability	extra	origin	extra	option

Spring preload

The sag recommandation should be set to 15 – 25% of total fork travel (30 to 50mm). If the sag measurement value is greater than the sag recommendations, add preload spacers according to the user manual.

Starting point adjustments : To start your adjustment, turn the knob clockwise until it stops (=clik 0). Then, clicks are counted turning the knob in the counterclockwise direction.

Recreational use
 Compression (A): 15 clicks
 Rebound (B): 18 clicks

Racing use
 Compression (A): 8 clicks
 Rebound (B): 16 clicks
